

Where is Your Control System On The Bathtub Curve?

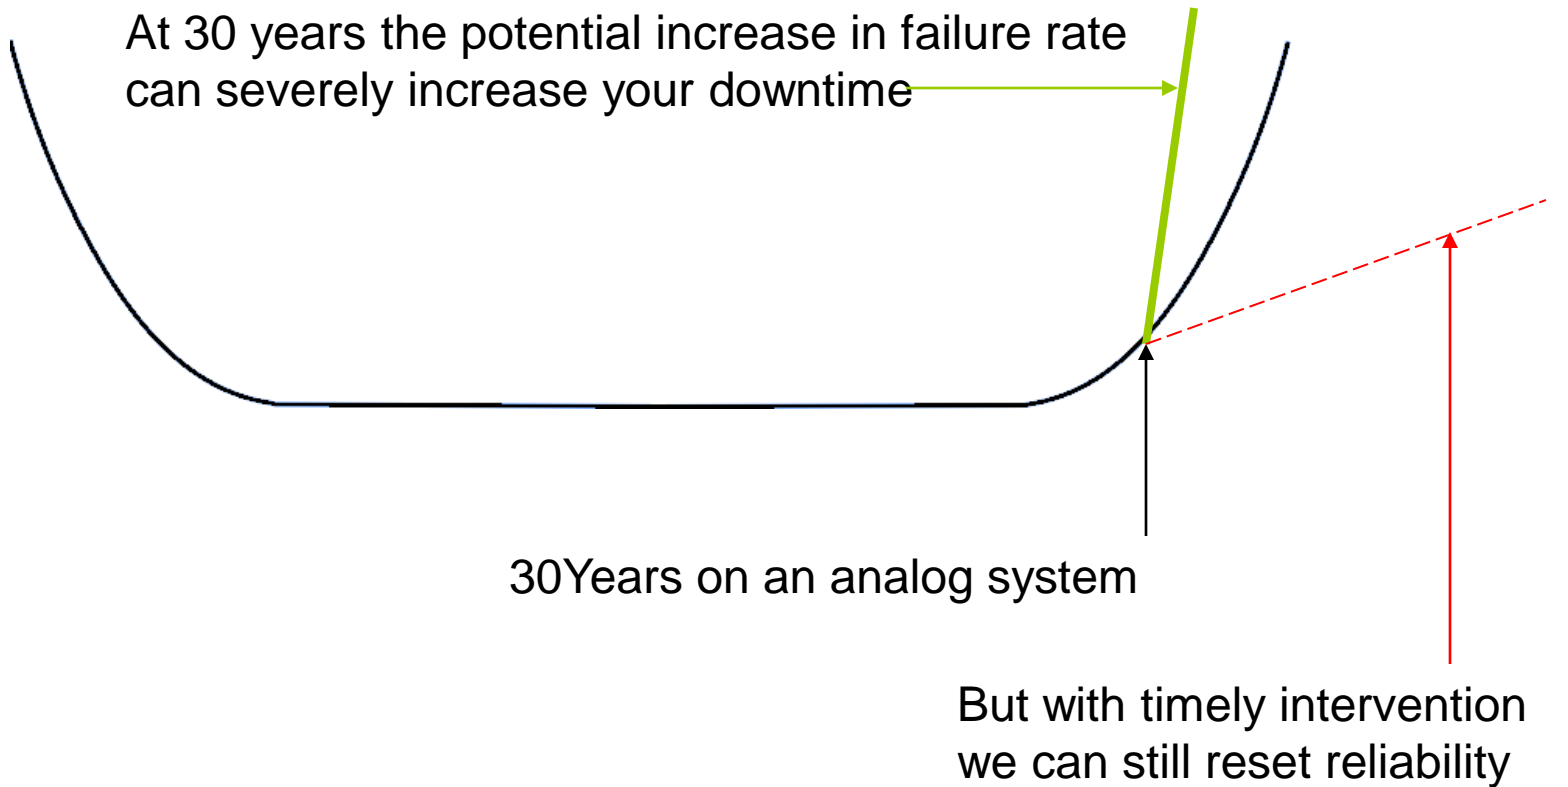

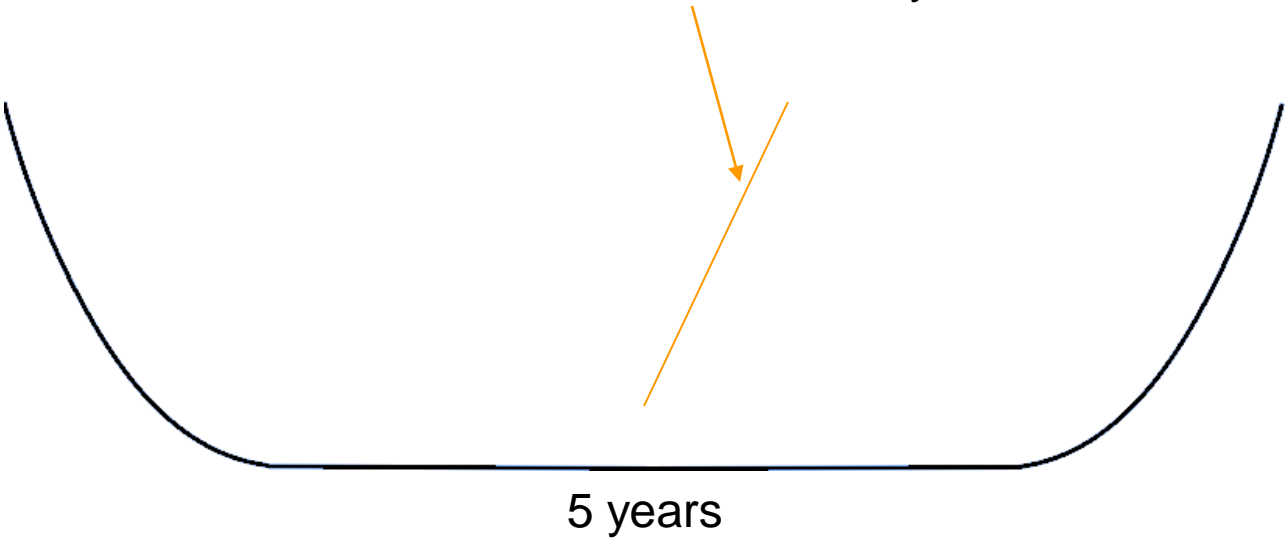

10 Years on an analog system

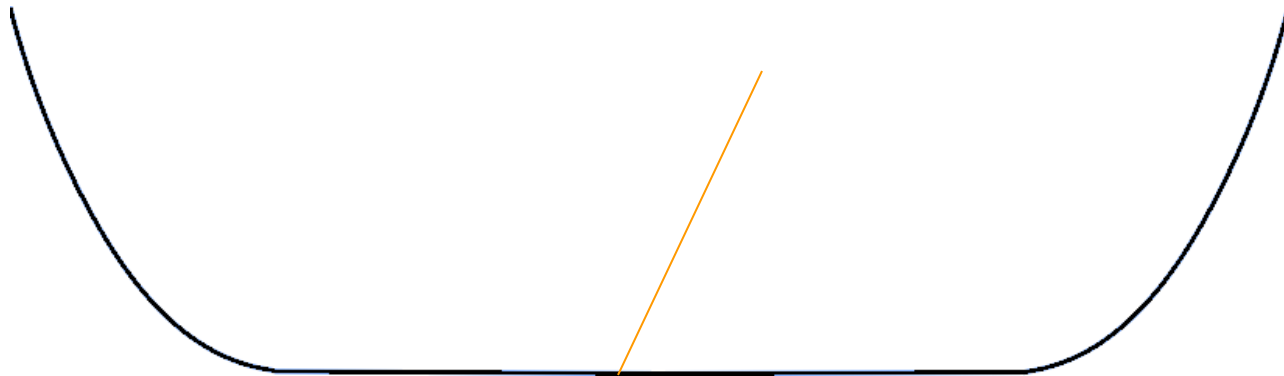

At the 10-year point we can flatten out the failure rate and improve the reliability of the system.

For digital control systems there is a 'shadow' failure rate at about 5 years

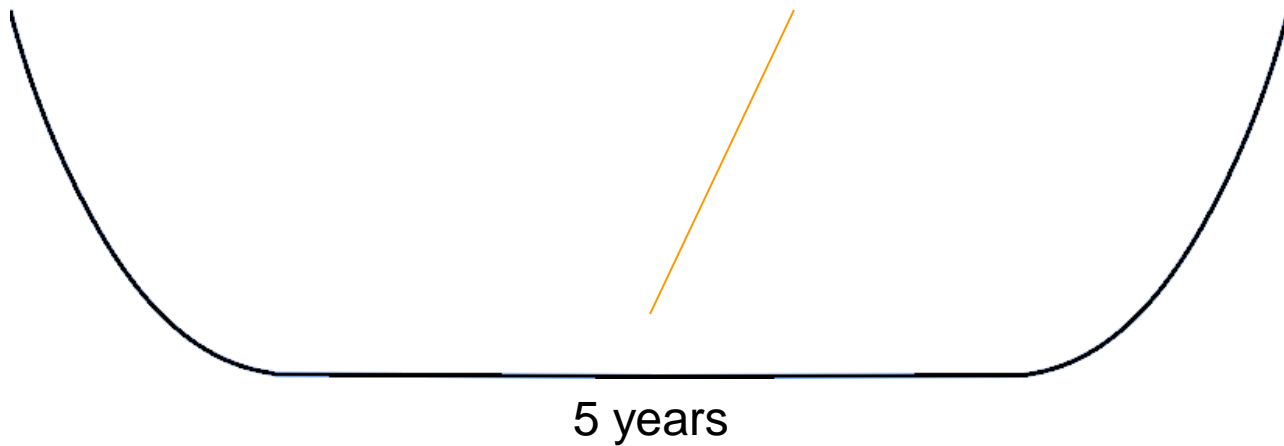

5 years

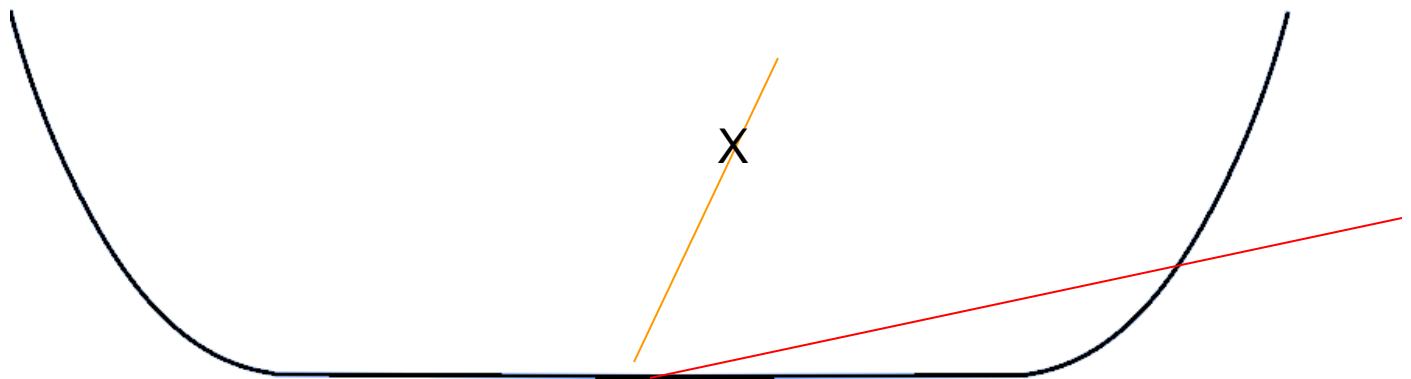

It is not an actual failure rate.

It is a potential loss of technical support
for software and hardware
due to system obsolescence.

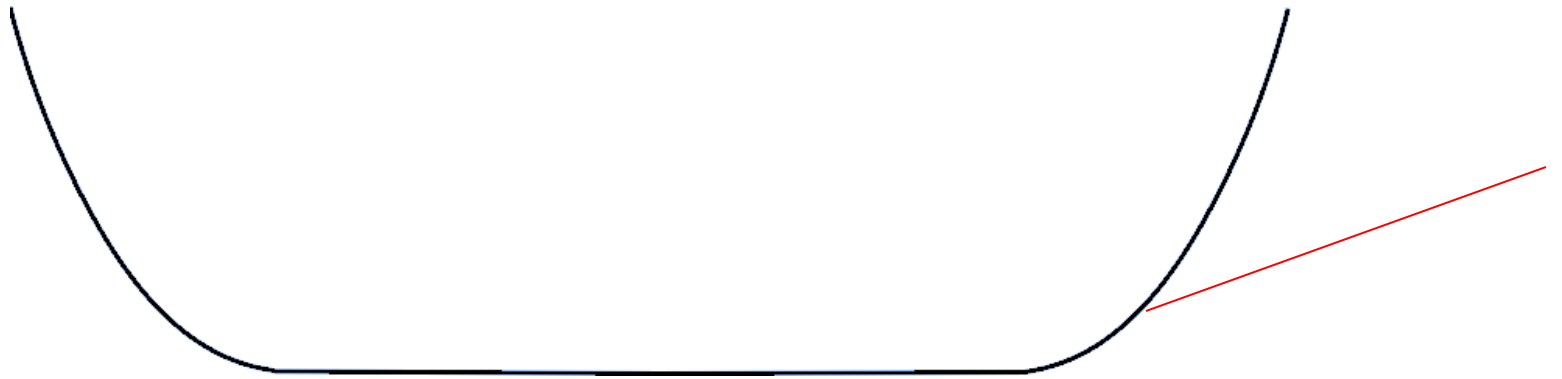

A failure at this point could cause serious downtime if you are not well stocked with spares, including spare laptops of appropriate vintage loaded with the right software and firmware.

We can help you with this, too.

Wherever you are on your bathtub curve,
let us reset it for you.
